Benjamin Lesko

New Orleans, LA | leskobenjamin15@gmail.com | linkedin.com/in/benjamin-lesko

Data engineer and technical lead with 4+ years across AI wearables and financial services, currently at Accenture supporting Meta. Build SQL/Python pipelines, AI agents, Azure RAG applications and privacy automation.

TECHNICAL SKILLS

Data: SQL, Python, Presto, Hive, Snowflake, Airflow
Engineering and analytics: ETL/ELT, data modeling, data quality, SLA monitoring, A/B testing, Sigma, Power BI
AI and development: OpenAI, AI agents, RAG, Azure, Cosmos DB, vector databases, Next.js, Git

PROFESSIONAL EXPERIENCE

Accenture | Client: Meta

Senior Analyst, Data Engineer — Wearables AI *May 2025 – Present*

- Helped migrate Wearables AI reliability reporting to shared daily-summary pipelines, cutting data scanned 50-fold and query time from about 120 to 20 seconds. Own pipeline operations, SLA monitoring and data quality checks supporting war-room reporting for VP-level market decisions.
- Built SQL annotation pipelines using deduplication and JSON extraction to track grading completeness, rejected tasks and factuality coverage. Led metric reviews and walkthroughs with 20+ collaborators.
- Built a Python AI agent that ran 200+ production pipeline backfills using LLM calls, scheduled workflows and data-arrival checks, reducing response time an estimated 90% and replacing contingent-worker effort for over $150K in estimated savings.
- Coordinated a privacy cleanup effort spanning 120+ tables and over 100 million interactions, standardizing dependency-ordered scripts, approvals and execution checks with engineering and Privacy/Legal teams. Separate retention cleanup reduced annual storage costs by approximately $60K.
- Co-developed privacy-scoping procedures and human-reviewed AI guidance, supporting reviews across 5,000+ assets and reducing estimated effort for comparable assignments from five hours to one.
- Migrated Horizon runtime and time-spent pipelines to a shared interval-based design, contributing to $20K in annual savings.
- Lead technical onboarding and operational support for three Accenture team members, partnering with Meta engineering and legal on Wearables AI data delivery.
- Designed an Azure-based RAG contract-analysis tool using OpenAI and Cosmos DB across 60+ statements of work, with estimated review effort reduced from hundreds of manual-review hours to hours of search.
- Co-built a full-stack Next.js AI platform for a community of 250+ practitioners, supporting project discovery and reuse.

North

Data Scientist — Intern to Associate *May 2022 – March 2025*

- Replaced Snowflake dynamic views with daily Airflow pulls, with a reported 25% reduction in compute costs, and automated SLA reporting that saved an estimated 1–2 hours per day.
- Automated credit review and underwriting in Python and SQL, eliminating an estimated 2,000 hours of manual work annually.
- Built 20+ Sigma and Power BI dashboards for 60+ stakeholders.

SELECTED PROJECT

SipTrack | Independent Developer | siptrack.app

- Built and launched SipTrack, an early-stage happy-hour discovery platform helping people compare local venues and deals. Developed the SwiftUI app, Next.js website and Supabase/Postgres backend, with Gemini-powered venue-data extraction and validation.

EDUCATION AND CERTIFICATION

Georgia Institute of Technology — M.S. Analytics, in progress
University of Michigan — B.S. Statistics, December 2022, Minor in Spanish
Professional Scrum Master I (PSM I), Scrum.org
